Avoid large layout shifts — 1 layout shift found

These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to <u>windowing</u>. <u>Learn how to improve CLS [CLS]</u>

Avoid chaining critical requests — 9 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. <u>Learn how to avoid chaining critical requests</u>.

Maximum critical path latency: 84.271 ms

Initial Navigation

```
/P12_Front-end/index.html (localhost)
```

...3.5.1/jquery.min.js (ajax.googleapis.com) - 75.077 ms, 30.37 KiB

/P12_Front-end/jquery.datetimepicker.full.min.js (localhost) - 4.434 ms, 59.72 KiB

/P12_Front-end/jquery.datetimepicker.css (localhost) - 4.189 ms, 18.30 KiB

 \dots 0.9.1/jquery.modal.min.js (cdnjs.cloudflare.com) - **75.747 ms,** 1.91 KiB

...0.9.1/jquery.modal.min.css (cdnjs.cloudflare.com) - 75.341 ms, 1.83 KiB

...1.12.1/jquery-ui.js (code.jquery.com) - 76.576 ms, 121.74 KiB

...base/jquery-ui.css (code.jquery.com) - 56.853 ms, 8.25 KiB

/P12_Front-end/app.js (localhost) - 3.402 ms, 6.10 KiB

about:blank 6/26

/P12_Front-end/app.css (localhost) - 3.071 ms, 0.62 KiB

○ Minimize third-party usage — Third-party code blocked the main thread for 20 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. <u>Learn how to minimize third-party impact</u>. (TBT)

| Third-Party | Transfer Size | Main-Thread Blocking Time |
|--|---------------|---------------------------|
| jQuery CDN Cdn | 137 KiB | 15 ms |
| 1.12.1/jquery-ui.js (code.jquery.com) | 122 KiB | 15 ms |
| base/jquery-ui.css (code.jquery.com) | 8 KiB | 0 ms |

All text remains visible during webfont loads

Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. <u>Learn more about font-display</u>.

Lazy load third-party resources with facades

about:blank 11/26

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. <u>Learn</u> how to defer third-parties with a facade. (TBT)

Largest Contentful Paint image was not lazily loaded

Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. Learn more about optimal lazy loading. [LCP]

Avoids document.write()

For users on slow connections, external scripts dynamically injected via document.write() can delay page load by tens of seconds. <u>Learn how to avoid document.write()</u>.

Avoid non-composited animations

Animations which are not composited can be janky and increase CLS. <u>Learn how to avoid non-composited</u> <u>animations</u> (CLS)

Image elements have explicit width and height

Set an explicit width and height on image elements to reduce layout shifts and improve CLS. <u>Learn how to set image</u> <u>dimensions</u> <u>CLS</u>

Page didn't prevent back/forward cache restoration

Many navigations are performed by going back to a previous page, or forwards again. The back/forward cache (bfcache) can speed up these return navigations. <u>Learn more about the bfcache</u>

91

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

ARIA

ARIA input fields do not have accessible names

When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more about input field labels</u>.

about:blank 12/26

| Failing Elements | |
|---|-------|
| span#state-button.ui-selectmenu-button.ui-selectmenu-button-closed.ui-corner-all.ui-button | |
| span#department-button.ui-selectmenu-button.ui-selectmenu-button-closed.ui-corner-all.ui | |

about:blank 14/26

PASSED AUDITS (19) Hide [aria-*] attributes match their roles Each ARIA role supports a specific subset of aria-* attributes. Mismatching these invalidates the aria-* attributes. Learn how to match ARIA attributes to their roles. [aria-hidden="true"] is not present on the document <body> Assistive technologies, like screen readers, work inconsistently when aria-hidden="true" is set on the document <body>. Learn how aria-hidden affects the document body. [role]s have all required [aria-*] attributes Some ARIA roles have required attributes that describe the state of the element to screen readers. Learn more about roles and required attributes. [aria-*] attributes have valid values Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more about valid values for ARIA attributes. [aria-*] attributes are valid and not misspelled Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more about valid ARIA attributes. Buttons have an accessible name When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. Learn how to make buttons more accessible. ARIA attributes are used as specified for the element's role Some ARIA attributes are only allowed on an element under certain conditions. Learn more about conditional ARIA attributes. [aria-hidden="true"] elements do not contain focusable descendents Focusable descendents within an [aria-hidden="true"] element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn how aria-hidden affects focusable elements. Elements use only permitted ARIA attributes

about:blank 15/26

Using ARIA attributes in roles where they are prohibited can mean that important information is not communicated to users of assistive technologies. <u>Learn more about prohibited ARIA roles</u>.

[role] values are valid ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more about valid ARIA roles. Background and foreground colors have a sufficient contrast ratio Low-contrast text is difficult or impossible for many users to read. Learn how to provide sufficient color contrast. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more about document titles. Form elements have associated labels Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more about form element labels. Links have a discernible name Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn how to make links accessible. No element has a [tabindex] value greater than 0 A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. Learn more about the tabindex attribute. Touch targets have sufficient size and spacing. Touch targets with sufficient size and spacing help users who may have difficulty targeting small controls to activate the targets. Learn more about touch targets. Heading elements appear in a sequentially-descending order Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. Learn more about heading order. Uses ARIA roles only on compatible elements

about:blank 16/26

Many HTML elements can only be assigned certain ARIA roles. Using ARIA roles where they are not allowed can interfere with the accessibility of the web page. <u>Learn more about ARIA roles</u>.

Deprecated ARIA roles were not used

Deprecated ARIA roles may not be processed correctly by assistive technology. <u>Learn more about deprecated ARIA roles.</u>

NOT APPLICABLE (36)

[accesskey] values are unique

Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. <u>Learn more about access keys</u>.

button, link, and menuitem elements have accessible names

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to make command elements more accessible</u>.

Elements with role="dialog" or role="alertdialog" have accessible names.

ARIA dialog elements without accessible names may prevent screen readers users from discerning the purpose of these elements. <u>Learn how to make ARIA dialog elements more accessible</u>.

ARIA meter elements have accessible names

When a meter element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to name meter elements</u>.

ARIA progressbar elements have accessible names

When a progressbar element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to label progressbar elements</u>.

O Elements with an ARIA [role] that require children to contain a specific [role] have all required children.

Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. <u>Learn</u> more about roles and required children elements.

[role]s are contained by their required parent element

Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more about ARIA roles and required parent element.

about:blank 17/26

| Elements with the role=text attribute do not have focusable descendents. | ^ |
|--|-------------|
| Adding role=text around a text node split by markup enables VoiceOver to treat it as one phrase, but the element's focusable descendents will not be announced. <u>Learn more about the role=text attribute</u> . | |

| Specifying a valid <u>BCP 47 language</u> helps screen readers announce text properly. <u>Learn how to use the lang</u> <u>attribute</u> . | |
| <html> element has an [xml:lang] attribute with the same base language as the [lang] attribute.</html> | ^ |
| If the webpage does not specify a consistent language, then the screen reader might not announce the page's t correctly. <u>Learn more about the lang attribute</u> . | ext |
| Image elements have [alt] attributes | ^ |
| Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with a empty alt attribute. <u>Learn more about the alt attribute</u> . | ın |
| Image elements do not have [alt] attributes that are redundant text. | ^ |
| Informative elements should aim for short, descriptive alternative text. Alternative text that is exactly the same at the text adjacent to the link or image is potentially confusing for screen reader users, because the text will be retwice. Learn more about the alt attribute. | |
| O Input buttons have discernible text. | ^ |
| Adding discernable and accessible text to input buttons may help screen reader users understand the purpose of the input button. <u>Learn more about input buttons</u> . | of |
| <pre>O <input type="image"/> elements have [alt] text</pre> | ^ |
| When an image is being used as an <input/> button, providing alternative text can help screen reader users understand the purpose of the button. Learn about input image alt text. | |
| Links are distinguishable without relying on color. | ^ |
| Low-contrast text is difficult or impossible for many users to read. Link text that is discernible improves the experience for users with low vision. <u>Learn how to make links distinguishable</u> . | |
| Lists contain only elements and script supporting elements (<script> and <template>). </td><td>^</td></tr><tr><td>Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output Learn more about proper list structure.</td><td></td></tr></tbody></table></script> | |

about:blank 19/26

| List items () are contained within , or <menu> parent elements</menu> | ^ |
|--|--------------|
| Screen readers require list items () to be contained within a parent , or <menu> to be announced properly. Learn more about proper list structure.</menu> | k |
| The document does not use <meta http-equiv="refresh"/> | ^ |
| Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. may create a frustrating or confusing experience. <u>Learn more about the refresh meta tag.</u> | This |
| [user-scalable="no"] is not used in the <meta name="viewport"/> element and the [maximum-scale] attribute is not less than 5. | ^ |
| Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. <u>Learn more about the viewport meta tag</u> . | |
| <object> elements have alternate text</object> | ^ |
| Screen readers cannot translate non-text content. Adding alternate text to <object> elements helps screen reaconvey meaning to users. Learn more about alt text for object elements.</object> | aders |
| Select elements have associated label elements. | ^ |
| Form elements without effective labels can create frustrating experiences for screen reader users. <u>Learn more at the select element</u> . | <u>about</u> |
| O Skip links are focusable. | ^ |
| Including a skip link can help users skip to the main content to save time. Learn more about skip links. | |
| Tables have different content in the summary attribute and <caption>.</caption> | ^ |
| The summary attribute should describe the table structure, while <caption> should have the onscreen title. Accurate table mark-up helps users of screen readers. Learn more about summary and caption.</caption> | |
| O Cells in a element that use the [headers] attribute refer to table cells within the same table. | ^ |
| Screen readers have features to make navigating tables easier. Ensuring cells using the [headers] attribute only refer to other cells in the same table may improve the experience for screen reader users. Learn more about headers attribute. | |
| elements and elements with [role="columnheader"/"rowheader"] have data cells they describe. | ^ |
| Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set cells may improve the experience for screen reader users. <u>Learn more about table headers</u> . | of |

about:blank 20/26

[lang] attributes have a valid value

Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn how to use the lang attribute</u>.

<video> elements contain a <track> element with [kind="captions"]

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. <u>Learn</u> more about video captions.

Best Practices

USER EXPERIENCE

Does not have a <meta name="viewport"> tag with width or initial-scale

No `<meta name="viewport"> ` tag found

A <meta name="viewport"> not only optimizes your app for mobile screen sizes, but also prevents <u>a 300</u> millisecond delay to user input. Learn more about using the viewport meta tag.

Document doesn't use legible font sizes

Text is illegible because there's no viewport meta tag optimized for mobile screens.

Font sizes less than 12px are too small to be legible and require mobile visitors to "pinch to zoom" in order to read. Strive to have >60% of page text ≥12px. Learn more about legible font sizes.

BROWSER COMPATIBILITY

Page lacks the HTML doctype, thus triggering quirks-mode Document must contain a doctype

Specifying a doctype prevents the browser from switching to quirks-mode. <u>Learn more about the doctype declaration</u>.

Charset declaration is missing or occurs too late in the HTML

A character encoding declaration is required. It can be done with a <meta> tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. <u>Learn more about declaring the character encoding</u>.

A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. <u>Learn</u> how to use a CSP to prevent XSS

| Description | Directive | Severity |
|----------------------------------|-----------|----------|
| No CSP found in enforcement mode | | High |

Use a strong HSTS policy

Deployment of the HSTS header significantly reduces the risk of downgrading HTTP connections and eavesdropping attacks. A rollout in stages, starting with a low max-age is recommended. <u>Learn more about using a strong HSTS policy.</u>

| Description | Directive | Severity |
|----------------------|-----------|----------|
| No HSTS header found | | High |

Ensure proper origin isolation with COOP

The Cross-Origin-Opener-Policy (COOP) can be used to isolate the top-level window from other documents such as pop-ups. <u>Learn more about deploying the COOP header.</u>

| Description | Directive | Severity |
|----------------------|-----------|----------|
| No COOP header found | | High |

GENERAL

Detected JavaScript libraries

All front-end JavaScript libraries detected on the page. <u>Learn more about this JavaScript library detection diagnostic audit</u>.

| Name | Version |
|--------|---------|
| jQuery | 3.5.1 |

| Name | Version |
|-----------|---------|
| jQuery UI | 1.12.1 |

PASSED AUDITS (11) Hide **Uses HTTPS** All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding mixed content, where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. Learn more about HTTPS. Avoids deprecated APIs Deprecated APIs will eventually be removed from the browser. Learn more about deprecated APIs. Avoids third-party cookies Third-party cookies may be blocked in some contexts. Learn more about preparing for third-party cookie restrictions. Allows users to paste into input fields Preventing input pasting is a bad practice for the UX, and weakens security by blocking password managers. Learn more about user-friendly input fields. Avoids requesting the geolocation permission on page load Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. Learn more about the geolocation permission. Avoids requesting the notification permission on page load Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. Learn more about responsibly getting permission for notifications. Displays images with correct aspect ratio Image display dimensions should match natural aspect ratio. Learn more about image aspect ratio.

Serves images with appropriate resolution

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. <u>Learn how to provide responsive images</u>.

about:blank 23/26

No browser errors logged to the console

Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. <u>Learn more about this errors in console diagnostic audit</u>

No issues in the Issues panel in Chrome Devtools

Issues logged to the Issues panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

Page has valid source maps

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. <u>Learn more about source maps</u>.

NOT APPLICABLE (2)

Redirects HTTP traffic to HTTPS

Make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. <u>Learn</u> more.

Mitigate clickjacking with XFO or CSP

The X-Frame-Options (XFO) header or the frame-ancestors directive in the Content-Security-Policy (CSP) header control where a page can be embedded. These can mitigate clickjacking attacks by blocking some or all sites from embedding the page. Learn more about mitigating clickjacking.

SEO

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on Core Web Vitals. Learn more about Google Search
Essentials.

CONTENT BEST PRACTICES

about:blank 24/26

Document does not have a meta description Meta descriptions may be included in search results to concisely summarize page content. Learn more about the meta description. Format your HTML in a way that enables crawlers to better understand your app's content. ADDITIONAL ITEMS TO MANUALLY CHECK (1) Hide Structured data is valid Run the Structured Data Testing Tool and the Structured Data Linter to validate structured data. Learn more about Structured Data. Run these additional validators on your site to check additional SEO best practices. PASSED AUDITS (6) Hide Page isn't blocked from indexing Search engines are unable to include your pages in search results if they don't have permission to crawl them. Learn more about crawler directives. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more about document titles. Page has successful HTTP status code Pages with unsuccessful HTTP status codes may not be indexed properly. Learn more about HTTP status codes. Links have descriptive text Descriptive link text helps search engines understand your content. Learn how to make links more accessible. Links are crawlable Search engines may use href attributes on links to crawl websites. Ensure that the href attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. Learn how to make links crawlable Document has a valid hreflang

about:blank 25/26

hreflang links tell search engines what version of a page they should list in search results for a given language or

region. Learn more about hreflang.
